

**Bellwork**  
**05/07/12**

Name the polygon by the number of sides.

1. **6** hexagon

2. **10** decagon

3. **5** Pentagon

4. **What is a regular polygon?**

Equilateral

Equiangular

**Geometry**  
**12.1 Explore Solids**  
**Standard(s): 3**

**Vocabulary:**

**Polyhedron:** A solid bounded by polygons (called faces).

**Edge:** A line segment formed by the intersection of two faces.

**Vertex:** A point where three or more edges meet.

**Regular:** All faces are congruent regular polygons.

**Convex:** All sides point outwards.

**Concave:** Any side caves inwards.

**KEY CONCEPT***For Your Notebook***Types of Solids****Polyhedra**

Prism

Pyramid

**Not Polyhedra**

Cylinder

Cone

Sphere

**THEOREM***For Your Notebook***THEOREM 12.1 Euler's Theorem**

The number of faces ( $F$ ), vertices ( $V$ ), and edges ( $E$ ) of a polyhedron are related by the formula  $F + V = E + 2$ .

$$F = 6, V = 8, E = 12$$

$$6 + 8 = 12 + 2$$

$$\text{Faces} + \text{Vertices} = \text{Edges} + 2$$

## Polyhedron or No?

Determine whether the solid is a polyhedron or not.

Yes!

No!

## Euler's Theorem

Use Euler's Theorem to find the value of  $n$ .

**Faces: 5**  
**Vertices: 6**  
**Edges:  $n$**

$$F + V = E + 2$$

$$5 + 6 = n + 2$$

$$11 = n + 2$$

$$n = 9 e.$$

**Faces: 8**  
**Vertices:  $n$**   
**Edges: 18**

$$8 + n = 18 + 2$$

$$8 + n = 20$$

$$n = 12 v.$$

## Sketch a Polyhedron

Sketch the polyhedron.

### Trapezoidal Pyramid

## Describe a Polyhedron

Find the number of faces, vertices, and edges of the polyhedron.  
Check your answer using Euler's Theorem.

8 f.  
12 v.  
18 e.

$$8 + 12 = 18 + 2$$

$$20 = 20 \checkmark$$

6 f.  
6 v.  
10 e.

$$6 + 6 = 10 + 2$$

$$12 = 12 \checkmark$$

## Convex or Concave?

Describe the polyhedron as *convex* or *concave*?

Convex

Concave

## Conic Sections

Describe the cross section formed by the intersection of the plane and the pentagonal prism.

Trapezoid

Triangle

## Homework Assignment

**Pg. 798-799**  
**#3-27 All**
