Graphing Quadratic Equations

# Bellwork

## 04/19/2012

Solve using the quadratic formula.

1.  $2x^2 - 4x - 14 = 0$

$$a = 2 \quad b = -4 \quad c = -14$$

$$x = \frac{4 \pm \sqrt{(-4)^2 - 4(2)(-14)}}{2(2)}$$

$$\frac{4 \pm \sqrt{16 + 112}}{4}$$

$$\frac{4 \pm \sqrt{128}}{4}$$

$$\frac{4 \pm 8\sqrt{2}}{4}$$

$$1 \pm 2\sqrt{2}$$

$$1 + 2\sqrt{2} \quad \text{and} \quad 1 - 2\sqrt{2}$$

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

$$\begin{array}{r} 128 \\ \hline 1 \overline{)128} \\ \underline{128} \\ 0 \end{array}$$

$$\begin{array}{r} \sqrt{64 \cdot 2} \\ \sqrt{64} \cdot \sqrt{2} \\ 8\sqrt{2} \end{array}$$

## Lesson 14.1a

### Describing a Quadratic

#### What You Need to Know:

To graph a quadratic equation:

1. Find Axis of Symmetry [A.O.S.]
2. Find Vertex
3. Make a T-Chart
4. Plot Graph

· If  $a$  is  $+$ , then the graph opens up. 

· If  $a$  is  $-$ , then the graph opens down. 

To find the A.O.S., use  $x = -\frac{b}{2a}$ .

This is also the  $x$ -coordinate of the vertex  $(x,y)$ .

To find the  $y$ -coordinate of the vertex, plug the  $x$ -value back into the equation.

To make an  $t$ -chart, pick  $x$ -values to the right or to the left of the  $x$ -coordinate.

To finish the graph, mirror the points across the A.O.S.

# Opens Up or Down?

Tell whether the graph opens up or down.

$$y=2x^2$$

+ , ↑

$$y=-4x^2-4x+12$$

- , ↓

$$y=-\frac{1}{2}x^2-x+1$$

- , ↓

## A.O.S. and Vertex

Find the A.O.S. and the vertex.

$$y = x^2 + 2x + 1$$

$$a = 1 \quad b = 2 \quad c = 1$$

$$x = \frac{-b}{2a} = \frac{-2}{2(1)} = \frac{-2}{2} = -1$$

$$\text{A.O.S.} \rightarrow x = -1 \quad \text{Vertex} \rightarrow (-1, 0)$$

$$y = (-1)^2 + 2(-1) + 1$$

$$y = 1 - 2 + 1$$

$$y = 0$$

$$y = -2x^2 - 8x + 12$$

$$a = -2 \quad b = -8 \quad c = 12$$

$$x = \frac{-b}{2a}$$

$$x = \frac{8}{2(-2)}$$

$$x = \frac{8}{-4}$$

$$\text{A.O.S.} \rightarrow x = -2$$

$$-2(-2)^2 - 8(-2) + 12$$

$$-2(4) - 8(-2) + 12$$

$$-8 + 16 + 12$$

$$20$$

$$\text{Vertex} \rightarrow (-2, 20)$$

$$y = -x^2 - x + 1$$

$$a = -1 \quad b = -1 \quad c = 1$$

$$x = \frac{-b}{2a}$$

$$x = \frac{1}{2(-1)}$$

$$x = -\frac{1}{2}$$

$$y = -\left(-\frac{1}{2}\right)^2 - \left(-\frac{1}{2}\right) + 1$$

$$y = -\frac{1}{4} + \frac{1}{2} + 1$$

$$\left(-\frac{1}{2}, \frac{11}{4}\right)$$

$$y = -\frac{1}{2}x^2 - 2x + 1$$

$$a = -\frac{1}{2} \quad b = -2 \quad c = 1$$

$$x = \frac{-b}{2a}$$

$$x = \frac{2}{2\left(-\frac{1}{2}\right)}$$

$$x = -2$$

$$x = -2$$

$$y = -\frac{1}{2}(-2)^2 - 2(-2) + 1$$

$$-\frac{1}{2}(4) - 2(-2) + 1$$

$$-2 + 4 + 1$$

$$(-2, 3)$$

## Lesson 14.1b

### Graphing a Quadratic

#### What You Need to Know:

To graph a quadratic equations:

1. Find Axis of Symmetry [A.O.S.]
2. Find Vertex
3. Make a T-Chart
4. Plot Graph

To find the A.O.S., use  $x = -\frac{b}{2a}$

This is also the x-coordinate of the vertex (x,y).

To find the y-coordinate of the vertex, plug the x-value back into the equation.

To make an t-chart, pick x-values to the right or to the left of the x-coordinate.

To finish the graph, mirror the points across the A.O.S.

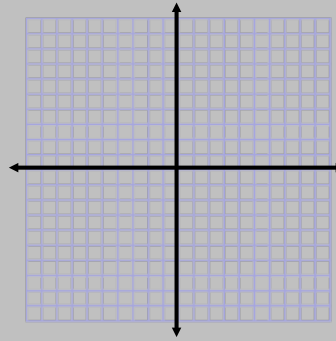

# Graphing Quadratic Equations

Find the A.O.S. and the vertex.

$$y=2x^2$$

Vertex: ( , )

AOS: x=

$$y=x^2+2x+1$$

Vertex: ( , )

AOS: x=

$$y=-x^2-2x+3$$

Vertex: ( , )

AOS: x=

$$y=-x^2+2$$

Vertex: ( , )

AOS: x=
